EDUCATION

University of Texas at Austin

Bachelor of Science in Computer Science, Minor in Statistics and Data Science

Austin, TX

Expected May 2028

RELEVANT COURSEWORK

Data Structures and Algorithms, Multivariable Calculus, Vector Calculus, Linear Algebra, Computer Architecture and Organization, Discrete Mathematics, Probability and Statistics

RELEVANT EXPERIENCE

Sustainable Building Initiative (SBI)

Austin, TX

Director of Internal Technologies

Aug 2026 – Present

- Promoted to Director of Internal Technologies; coordinate team priorities, meetings, and internal project planning.

Software Engineer

Sep 2025 – Aug 2026

- Engineered a scalable, schema-driven questionnaire engine using TypeScript, React, and Supabase, reducing frontend boilerplate by approximately **80%** while supporting **8+ distinct input types** and validation for **40+ fields**.
- Architected decision-tree logic that processes client input to trigger **3 specialized downstream workflows**, designed to scale to **10+ conditional branches**.
- Integrated **Supabase** with **row-level security** and a **1-second debounced autosave** pipeline, persisting responses across sessions via atomic **UPSERT** operations.

MavenCode

Southlake, TX

Engineering Intern

Jun 2026 – Aug 2026

- Co-designed and fabricated lightweight components for a **Titan Dynamics Cobra hybrid VTOL: LW-PLA** control surfaces, carbon-fiber spar and hinge assemblies, motor/servo mounts, and mechanical linkages.
- Optimized **Creality Print** settings for LW-PLA control surfaces, evaluating wall count, sparse infill, layer height, and orientation to balance mass, stiffness, and aerodynamic surface quality.
- Built **Python** servo-validation tooling with **GPIO Zero**, **lgpio**, and a **PCA9685 PWM driver** to test four EMAX servos; component-tested **GPS, receiver, and telemetry** interfaces.

Edikt Studios

Keller, TX

Game Developer Intern

Aug 2022 – May 2025

- Developed interactive gameplay features for team and solo projects using **Unity/C#** and **Unreal Engine/Blueprints** during a nearly three-year internship, supporting multi-platform production.

PROJECTS

Morning Commute | *Java, Apache Kafka, Spring Boot, Docker, PostgreSQL*

- Created a 3-service ecosystem (trips, pricing, analytics) that streams trip events through **Apache Kafka** and aggregates them in 1-hour windows with **Kafka Streams**.
- Implemented a reactive pricing service that reads **real-time Kafka event streams** to calculate demand multipliers via a surge pricing algorithm, simulating production-grade ride-hailing logic.
- Built a time-series pipeline that stores hourly demand in **PostgreSQL** and deployed the five-container stack with **Docker Compose**.

Perspect AI | *Bun, Express, React, TypeScript, SSE, Gemini API*

- Built a study tool that streams expert debates and a final study guide to the browser via **Server-Sent Events**.
- Implemented a **Bun/Express** endpoint using **Gemini 2.5 Flash** to select 3 of 10 expert personas, coordinate rebuttals, and synthesize takeaways.

TECHNICAL SKILLS

Languages: Java, Python, C, C#, JavaScript, TypeScript, HTML/CSS

Frameworks/Technologies: Spring Boot, React, Express, Bun, Supabase, Apache Kafka, Kafka Streams, PostgreSQL, Docker, Google Cloud Platform, Git, SSE
